

# Battery-Powered Noise Generator

This is the simplest practical instrument for noise music that you can make. A volume control, a mute switch, and a boost switch. Totally intuitive!

The battery is disconnected automatically when you unplug the output cable. The battery should last around 1000 hrs.

Current production (2008) uses silicon noise transistors for a smoother, deeper sound.

approx.  $3\frac{1}{2}'' \times 5\frac{1}{2}'' \times 1\frac{1}{4}''$

case is unfinished cast aluminum.
